

Don Bosco Institute of Technology, Kurla(W)
Department of Electronics and Tele-Communication Engineering
ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

Lab Number:	4
Student Name:	Rakshita Rajeev Khantwal
Roll No :	26

Title:

4.1 Write a Java program to Create a class Student with two method getData() and printData(). getData() to get the value from the user and display the data in printData(). Create the two objects s1 ,s2 to declare and access the values from class StudentTest.

4.2 Write a Java program for Basic bank Management System

Learning Objective:

- Students will be able to write C++ and java program for using classes and objects.

Learning Outcome:

- Ability to execute a simple C++ and Java program by accepting and displaying values using functions
- Understanding the classes and objects concept in C++ and Java.

Course Outcome:

ECL304.1	Understand object-oriented programming concepts and implement using C++ and Java
-----------------	--

Theory:

Q1. Explain about Constructor.

A constructor is a block of codes similar to the method. It is called when an instance of the class is created. At the time of calling constructor, memory for the object is allocated in the memory. It is a special type of method which is used to initialize the object.

Every time an object is created using the new() keyword, at least one constructor is called. It calls a default constructor if there is no constructor available in the class. In such case, Java compiler provides a default constructor by default.

There are two types of constructors in Java: no-arg constructor and parameterized constructor.

Q2. Explain about classes and objects in Java

2021-22

CLASS: It is a user defined blueprint or prototype from which objects are created. It represents the set of properties or methods that are common to all objects of one type. In general, class declarations can include these in order:

1. Modifiers: A class can be public or has default access class keyword: class keyword is used to create a class.
2. Class name: The name should begin with an initial letter (capitalized by convention).
3. Superclass (if any): The name of the class's parent (superclass), if any, preceded by the keyword extends. A class can only extend (subclass) one parent.
4. Interfaces (if any): A comma-separated list of interfaces implemented by the class, if any, preceded by the keyword implements. A class can implement more than one interface.
5. Body: The class body surrounded by braces, { }.

OBJECTS: It is a basic unit of Object-Oriented Programming and represents the real life entities. A typical Java program creates many objects, which as you know, interact by invoking methods. An object basically consists state, behaviour, identity.

Q3.How to access class attributes and methods? Explain with example

You can access attributes by creating an object of the class, and by using the dot syntax (.).In the example we will create an object of the Main class, with the name myObj. We use the x attribute on the object to print its value.

EG. Create an object called "myObj" and print the value of x:

```
public class Main {  
  
    int x = 5;  
  
    public static void main(String[] args) {  
  
        Main myObj = new Main();  
  
        System.out.println(myObj.x);  
  
    }  
}
```

Or override existing values:

EG. Change the value of x=25

```
public class Main {  
  
    int x = 10;
```

Don Bosco Institute of Technology, Kurla(W)
Department of Electronics and Tele-Communication Engineering
ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

```
public static void main(String[] args) {  
  
    Main myObj = new Main();  
  
    myObj.x = 25; // x is now 25  
  
    System.out.println(myObj.x);  
  
}  
}
```

If you don't want the ability to override existing values, declare the attribute as final:

```
public class Main {  
  
    final int x = 10;  
  
  
  
    public static void main(String[] args) {  
  
        Main myObj = new Main();  
  
        myObj.x = 25; // will generate an error: cannot assign a value to a final variable  
  
        System.out.println(myObj.x);  
  
    }  
  
}
```

METHODS: Methods define behaviour of a class. A method contains business logic which is executed when the method is invoked. Methods are the ways to manipulate objects data. Let's take a look at the below example

Syntax of a method :

<access-modifier> <return-type> <name-of-the-method> ({optional}<type-of-parameter> <name-of-the-parameter>){ //method logic //method logic }

example: public void displayPlayerInfo()

1. Write a Java program to Create a class Student with two method getData() and printData().
getData() to get the value from the user and display the data in printData(). Create the two objects
s1 ,s2 to declare and access the values from class StudentTest.

Algorithm :	 <p>Step 1 : Start</p> <p>Step 2 : I/P name, roll no, department, cgpa for student 1</p> <p>Step 3 : Print result for student 1 and 2</p> <p>Step 4 : Stop</p>
Program:	<pre>import java.util.Scanner; class Student { Scanner in=new Scanner(System.in); String name; int rollno; String department; float cgpa; //method overloading void getData() { Scanner t = new Scanner(System.in); System.out.println("Student name ="); name= t.next(); System.out.println("Student rollno ="); rollno= t.nextInt(); System.out.println("Student department ="); department= t.next(); System.out.println("Student cgpa="); cgpa= t.nextFloat(); } void getdata(String n, int r, String d, float c) { name=n; rollno=r; department=d; cgpa=c; } void printdata() {</pre>

Don Bosco Institute of Technology, Kurla(W)

2. Write a Java program for Basic bank Management System

Algorithm :	
Program:	<pre>import java.util.Scanner; public class BankLab2 { Scanner in=new Scanner(System.in); String name; char account_type; int account_number,amount; float balance; public BankLab2(String n,int a, char t, float b) { // TODO Auto-generated constructor stub</pre>

Don Bosco Institute of Technology, Kurla(W)
Department of Electronics and Tele-Communication Engineering
ECL304 - Skill Lab: C++ and Java Programming
Sem III
2021-22

```
        name = n;

        account_number=a;

        account_type=t;

        balance=b;

    }

    int deposit()
    {
        System.out.println("Enter the amount to deposit: ");
        int amount=in.nextInt();
        if(amount<0)
        {
            System.out.println("Invalid amount,Enter a valid
amount");

            return 0;
        }
        balance=balance+amount;
        return 1;
    }

    int withdraw()
    {
        System.out.println("Your Balance= " +balance );
        System.out.println("Enter amount to withdraw: ");
        int amount=in.nextInt();
        if (balance<amount)
        {
```
